

JECINTA WANGUI

Full-Stack Software Engineer · React / Angular · Django / Spring Boot

0111 969 356 | jecintawangui2001@gmail.com | Nairobi, Kenya | github.com/Jess2001 | [Portfolio](#) | [LinkedIn](#)

PROFESSIONAL SUMMARY

Full-stack software engineer with 2+ years of production experience across React, Angular, and Django, plus hands-on project experience building REST APIs in Java with Spring Boot. Proven track record delivering multi-tenant SaaS platforms across healthcare and fintech, integrating payment systems (M-Pesa, Stripe), and tracing production issues end-to-end across the frontend, API, and database layers. Comfortable moving across the stack to ship and support real-world features, with a measurable habit of query and pipeline optimisation (including a recurring 30% latency reduction).

TECHNICAL SKILLS

- Frontend: React JS · Angular (v12–20) · TypeScript · RxJS · Redux / NgRx · JavaScript (ES6+) · HTML5 · CSS3 / SASS · Tailwind CSS · Angular Material
- Backend: Python (Django, Django REST Framework) · Node.js · Java (Spring Boot — project experience) · REST API design · JWT · OAuth2 · RBAC
- Databases: PostgreSQL · MongoDB · MySQL · Redis · SQLite — query writing, indexing, optimisation
- Payments & Integrations: M-Pesa STK Push · Stripe API
- Testing & Quality: PyTest / pytest-django · Postman · code review
- Tools & DevOps: Git & GitHub · Docker · GitHub Actions (CI/CD) · Linux · NGINX · Sentry · Agile / Scrum

PROFESSIONAL EXPERIENCE

Software Engineer — Izola Life

Jun 2024 – Jun 2026

Distributed team across Kenya and Germany · React · Angular · Django · PostgreSQL · MongoDB

- Built and maintained the Xaidi Admin Dashboard, a multi-tenant healthcare SaaS platform in Angular delivering real-time analytics, appointment tracking, and therapist management across multiple tenant organisations.
- Led migration of platform modules from React Native to optimised React JS web components, maintaining feature parity across the user-facing interface.
- Engineered interactive revenue and reporting dashboards with multi-attribute filtering (year, revenue stream, subscription type, payment status).
- Implemented role-based access control (RBAC) and tenant-isolation logic to securely partition organisation, therapist, and admin data.
- Integrated M-Pesa STK Push and Stripe API webhooks to automate invoicing, receipt generation, and subscription payment flows.
- Optimised data-fetching pipelines and database indexing across PostgreSQL and MongoDB, reducing query latency by 30%.
- Configured Sentry error tracking and traced production incidents — including payment webhook failures — from user report through the API and database layers to resolution.

Frontend Engineering Intern — E and M Technology House

Aug 2023 – Mar 2024

Angular · REST API integration into the UI

- Built Angular frontend components and transaction management interfaces for a multi-tenant SACCO banking platform — member account views, loan tracking, and contribution dashboards.
- Integrated REST APIs into the UI to display account, transaction, and branch-level data across multiple financial institutions.
- Built UI flows for digital wallet functionality, surfacing mobile-based financial transactions to end users.
- Used browser dev tools and Postman to inspect network requests and verify API responses before wiring data into UI components.
- Collaborated with backend engineers on API contracts within a multi-tenant, role-based platform architecture.

Software Developer Intern — Au Innovations

May 2022 – Aug 2022

- Supported enterprise workflows using Microsoft Dynamics 365 Business Central.
- Authored technical process documentation that reduced application support overhead by 30%.
- Developed and maintained WordPress-based business websites and client-facing landing pages.

KEY PROJECTS

EduPulse — Education Analytics System | *Angular · Spring Boot · Java · PostgreSQL · REST APIs*

- Built a full-stack student performance tracking platform covering exam results, subject-level performance, and class-level reporting.
- Implemented a Spring Boot service-repository architecture with structured REST APIs for student records, analytics, and grading.
- Built a responsive, role-based Angular dashboard (Admin / Teacher / Student) with reusable components and data visualisations.

Clinic Booking API — Concurrency-Safe Scheduling Engine | *Python · Django REST Framework · PostgreSQL · Docker · GitHub Actions*

- Engineered a clinic booking system on a fixed-grid, timezone-safe (UTC) scheduling architecture.
- Solved high-concurrency double-booking race conditions using pessimistic locking (`select_for_update`) inside atomic transactions, backed by composite SQL unique constraints.
- Implemented JWT-based auth that derives user context from tokens to prevent client-side ID spoofing and mask PII fields.
- Built a pytest-django test suite and a GitHub Actions CI/CD pipeline that runs tests on every pull request.

Credit Risk Signal Engine | *Python · Django · PostgreSQL · Docker*

- Built a credit-risk scoring REST API with a service-layer architecture, PostgreSQL persistence, and Docker containerisation for reproducible environments.

Global Medical Facilities Platform — Outreachy Open Source Internship | *Figma · HTML · CSS · Flutter*

- Contributed to an open-source platform connecting hospitals and medical facilities globally, as a selected Outreachy contributor.

LEADERSHIP & RECOGNITION

- Provided technical mentorship and code review to onboarding interns.
- Led an international job-shadowing programme for tech-track high school students; received a Certificate of Recognition for outstanding leadership.

EDUCATION

Bachelor of Science in Computer Science — Kabarak University, Nakuru, Kenya

2019 – 2023 | *Second Class Honours, Upper Division*

Relevant Coursework: Data Structures, Operating Systems, Computer Networks, Database Management Systems, Software Architecture
